As the claims seem to be the only objection that you presented, I am requesting reconsideration or further examination by changing my original claim, and not leaving it so generally.

Because, I only use one reversible rubber plug to seal and apply pressure, and no four (4) as Davenport.

- A cone shaped member
- A sealing attachment
- A ball shaped member
- A compressible cup

The only features in common that we share are; water under pressure, a hose, a glove valve, and a PVC pipe to unclog drains. However, we seal the drains orifice in a different way, specially the general use of the rubber plug when it presents a flat surface that covers the drain hole without partially extending into the drain hole.
